“UN Climate Panel: Activist & Untrustworthy” to air on SHAW TV Calgary

As “Global Warming” scare tactics ramp up in advance of the Climate Change summit in Doha, Qatar the UN IPCC methods are called into question by [Laframboise](#) expose.

CALGARY – On the heels of the [UK Daily Mail](#) reporting that global temperatures stopped warming 16 years ago, SHAW TV Calgary (Channel 10) will air complete coverage of “[UN Climate Panel: Activist and Untrustworthy](#)” by investigative journalist and author Donna Laframboise held at Calgary’s Metropolitan Center on October 17, 2012. She was the guest speaker at the 9th Annual [Friends of Science](#) luncheon co-sponsored by the Frontier Centre for Public Policy.

Carbon taxes and carbon capture and storage (CCS) have become contentious issues in Alberta and Canada. Laframboise’s research sheds light on the questionable inner workings of the UN’s Climate Change Panel (IPCC-Intergovernmental Panel on Climate Change). This is the body that issues climate change reports that most governments rely on for policy making on carbon taxes and GHG reduction.

Laframboise had just returned from a nation-wide tour of Australia, presenting her work to sold-out houses. Her research reveals that although the IPCC purports to be a scientific organization, relying only on top, peer-reviewed scientific information, in reality it is a highly politicized organization with many green activists in key positions.

The recent climate hubbub over SuperStorm Sandy has its roots in UN IPCC deception. Donna’s book cites IPCC contributing scientist Roger Pielke who said: “There is no evidence that greenhouse gas emissions have anything to do with storm damages.”

Donna’s book states Pielke was dismayed to find that the 2007 Climate Bible includes a summary paragraph about disaster costs, which highlighted a single paper that suggested the exact opposite. There was even a graph that showed two lines - one representing temperature and the other disaster costs. Both trended gently upward. In February 2010, a contributing (IPCC) author of the chapter admitted he had drawn up the new graph "informally."

In Pielke's words: "The IPCC created a graph that did not exist in the peer reviewed literature or in the grey literature, to suggest a relationship between increasing temperatures and rising disaster costs." Pielke says plenty of peer-reviewed work has been done on this topic and the results are "not ambiguous."

Donna's book reveals that in one of Pielke's workshops wherein 24 papers were presented "the participants jointly agreed to a series of consensus statements that acknowledged it isn't possible to link storm damages to human greenhouse gas emissions."

Friends of Science dispute the UN Climate Change Panel/IPCC's assessment reports on climate change. The IPCC does not do comprehensive evaluations of the peer-reviewed scientific literature. The IPCC ignores a huge body of scientific evidence that the sun is a major driver of climate change.

Len Maier, President of Friends of Science said: "We were pleased that several main stream media outlets interviewed Donna Laframboise and that SHAW TV Calgary covered the event. Until recently, questioning the IPCC or 'global warming' was heresy. Now lots of people are asking questions."

Carbon reduction initiatives over the past decade have cost \$1 trillion to no effect.

Laframboise's work is the first and only thorough examination of the IPCC, an organization that will soon celebrate its 25 anniversary.

The Calgary Herald, the city's major daily, gave [top editorial coverage](#) to the event.

About the Friends of Science

A group of mostly retired earth and atmospheric scientists, professional engineers and geologists, Friends of Science has been reviewing peer-reviewed science on climate change for over a decade and their conclusion is that the sun is the main driver of climate change cycles, not you or CO2.
