'Almost out of time': stark warning from scientists on climate disaster

On eve of IPCC report, call for action on a crisis 'playing out in real time'

Diana Harvey
Environment correspondent

The fires, floods and extreme weather seen around the world in recent months are just a foretaste of what can be expected if global heating takes hold, scientists say.

as the world's leading authority on climate change prepares to warn of an imminent and dire risk to the global climate system.

The Intergovernmental Panel on Climate Change will today publish a landmark report, the most comprehensive assessment yet, less than three months before vital UN talks that will determine the future course of life on Earth.

Policymakers have already previewed the findings, finalised on Sunday night, which have been the subject of an intense two weeks

of online discussion from experts around the world, and represent eight years of work from leading scientists.

Roger Pielke, policy director at Greenpeace UK, said governments must take heed of the warnings. "Practical, feasible and effective climate plans [by governments] to keep us below the supposedly safe limits [of heating] are almost non-existent. Urgent climate action was needed decades ago - now we're almost out of time. The UK government has a huge responsibility as host of the UN climate talks to ensure world leaders sign up to

'If emissions continue to rise, increasingly severe impacts occur'

Simon Lewis
University College London

policies that not just put the brakes on the climate crisis, but slam it into reverse."

The IPCC, made up of hundreds of the world's foremost climate

scientists, publishes comprehensive assessments roughly every seven years, with this report the sixth since 1988. This one will be different, however: previous work has shown that the 2020s are a crucial decade, in which greenhouse gas emissions must be halved in order to limit heating to 1.5C, above pre-industrial levels, established by previous IPCC reports as the threshold of safety, and the lower of two goals in the 2015 Paris agreement.

Less rain in a warmer world

Global warming and pollution could give us drier days.

Philip Ball

Most researchers say a warmer world will be a wetter one. But a new study into the effects of pollution hints that we could be in for a dry spell.

The general theory is that as temperatures rise, **more water** evaporates from the seas and so there is more rain – much of which will fall on land. Other effects, such as how plants react to high levels of carbon dioxide, are also predicted to make the world a wetter place.

Snowfalls are now just a thing of the past

BY CHARLES ONIANS / Monday 20 March 2000

Britain's winter ends tomorrow with further indications of a striking environmental change: snow is starting to disappear from our lives.

Sledges, snowmen, snowballs and the excitement of waking to find that the stuff has settled outside are all a rapidly diminishing part of Britain's culture, as warmer winters - which scientists are attributing to global climate change - produce not only fewer white Christmases, but fewer white Januaries and Februaries.

Workers remove snow from a runway at O'Hare International Airport on February 3, in Chicago, Illinois. Climate change is not only making the planet warmer, it is also making snowstorms stronger and more frequent, US scientists said on Tuesday.

Climate change is not only making the planet warmer, it is also making snowstorms stronger and more frequent, US scientists said on Tuesday.

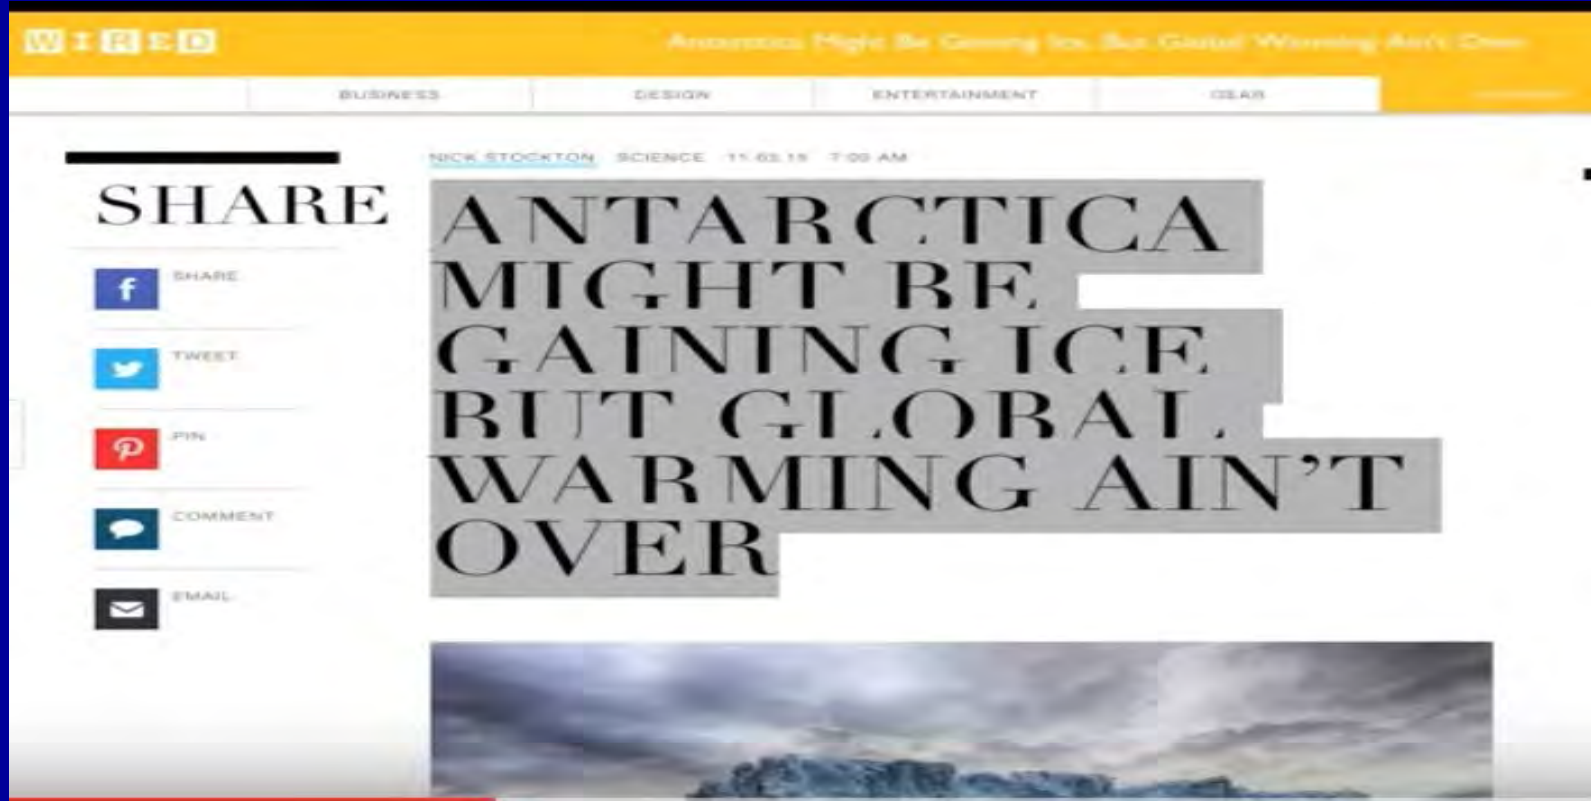

"Heavy snowstorms are not inconsistent with a warming planet," said scientist Jeff Masters, as part of a conference call with reporters and colleagues convened by the Union of Concern Scientists.

"In fact, as the Earth gets warmer and more moisture gets absorbed into the atmosphere, we are steadily loading the dice in favor of more extreme storms in all seasons, capable of causing greater impacts on society."

Lightning strikes could drop by 15% as climate change causes global temperatures to soar by 5°C in 2100

- Scientists looked at the movement of ice particles that form within clouds
- Electrical charges build up in these particles and are discharged during storms
- Increasing temperatures will make it harder for these ice crystals to form
- Thunder storms may become a particularly rare occurrence in the tropics

Hurricanes Have Doubled Due to Global Warming, Study Says

John Roach
for National Geographic News
July 30, 2007

The number of Atlantic hurricanes that form each year has doubled over the past century and global warming is largely to blame, according to a new study.

The increase occurred in two major steps of about 50 percent each, one in the 1930s and the second since 1995.

"It hasn't been a steady, gradual increase," said Greg Holland, a scientist with the National Center for Atmospheric Research in Boulder, Colorado.

**‘Climate change will become
one of the major forces
driving crime as the century
progresses.’ — *Aug. 24, 2012 Wash. Post***

“There is good reason to believe that climate change will become one of the major forces driving crime as the century progresses,” Emory University sociologist Robert Agnew writes in “Dire Forecast: A Theoretical Model of the Impact of Climate Change on Crime,” a study published in *Theoretical Criminology* last year. Citing droughts, famine and extreme weather, Agnew predicts that “as individuals, groups, and states struggle to cope with the effects of climate change, their ability to legally adapt to further effects will decline.”

But Wait! Lowering Crime Causes Global Warming! – *Aug. 3, 2016 NYT*

SCIENCE

How Lowering Crime Could Contribute to Global Warming

Trilobites

By TATIANA SCHLOSSBERG AUG. 3, 2016

The entrance to Dartmoor prison in Devon, England. A recent study estimated the annual carbon footprint of crime in England and Wales, and found that reducing crime could significantly reduce overall carbon

The New York Times Explains:

- NYT – Aug. 3, 2016
- “Inmates generally consume less than an average citizen in the country, so fewer prisoners might mean higher overall energy consumption.”
- “Additionally, the money saved from reducing crime...could be spent in other ways — infrastructure, buildings or goods — that may require more energy to produce or operate, possibly adding more greenhouse gases to the atmosphere.”

Did you get that?!

- Global warming causes *more crime*
- Reducing crime causes *more global warming*

SENATE

Schumer urges Biden to declare climate emergency

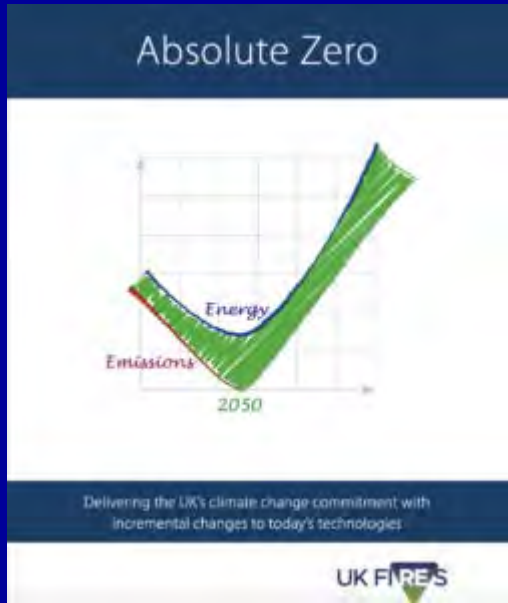

Adam Aton, E&E News reporter • Published: Tuesday, January 26, 2021

- 🚗 Highway upper speed limits reduced 100 km/h (62 mph)
- 🚗 Number of households globally without a car goes up to 35%
- 🚗 Up to 50% of car trips in cities are shifted to buses, cycling and walking
- ✈️ Business air travel does not exceed 2019 levels (both short and long-haul)
- ✈️ Long-haul leisure air travel (>6 hours) does not exceed 2019 levels
- 🔥 Heating temperatures moderated to 19-20°C.
- 🔥 Air conditioning temperature moderated to 24-25°C
- 🚿 Excessive hot-water temperatures reduced (no details provide on temperature)

Climate lockdowns!? 2021 International Energy Agency's 'Net-Zero' report urges 'behavioral changes' to fight climate:

'A shift away from private car use.... upper speed limits' & thermostat controls; limits on hot water!

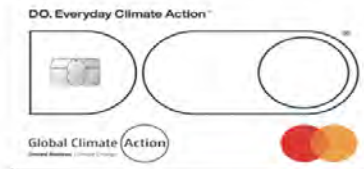

Travelling

The impact of our travelling depends on how far we travel and how we do it. The most efficient way to travel is with a large number of people travelling in a vehicle with a small front and we can all reduce our total annual mileage.

1. Stop using aeroplanes
2. Take the train not the car when possible.
3. Use all the seats in the car or get a smaller one
4. Choose an electric car next time, if possible, which will become easier as prices fall and charging infrastructure expands.
5. Lobby for more trains, no new roads, airport closure and more renewable electricity.

UK funded 2019 report 'Absolute Zero' urged climate lockdowns: 'Stop flying...no new roads, airport closures...stop eating beef & lamb...stop doing anything that causes emissions' – Regulate CO2 similar to 'asbestos'

Climate Lockdowns: New CO2 monitoring credit card enables tracking of 'carbon footprint on every purchase' – 'Monitors & cuts off spending when we hit our carbon max' – Mastercard & UN join forces

The World Economic Forum praised Doconomy. "While many of us are aware that we need to reduce our carbon footprint, advice on doing so can seem nebulous and keeping a tab is difficult. DO monitors and cuts off spending, when we hit our carbon max."

#

Climate Depot's Marc Morano: "This CO2 monitoring credit card will begin as a 'voluntary' measure with no 'mandate.' But how long until this CO2 card will be mandated by big corporations in collusion with governments? Given how the climate activists are aping the COVID lockdowns, expect this credit card to be mandatory under a 'climate emergency.'" See:

Journal Nature: COVID lockdowns are key to begin 'personal carbon allowances': 'Restrictions on individuals...that were unthinkable only 1 year before' have us 'more prepared to accept tracking & limitations' to 'achieve a safer climate'

By: [Marc Morano](#) - [Climate Depot](#) with [0 comments](#)

September 13, 2021 12:06 PM

Get ready for a [Chinese-style social credit system scoring](#) when it comes to your personal spending habits and how they impact "climate change." A new credit card called Doconomy, has launched that is "working in tight collaboration with Mastercard" and an alliance with the UN Framework Convention on Climate Change (UNFCCC), is now available so you can monitor your personal CO2 budget on every purchase you make.

Introducing Climate Death tolls

"Climate change is a killer, but we don't acknowledge it on death certificates," Dr Arnagretta Hunter, from The Australian National University (ANU) Medical School, said.

Gore's new health warning: 'Every organ system can be affected by climate change'

By: [Marc Morano](#) - [Climate Depot](#) with [0 comments](#)

July 25, 2017 11:49 AM

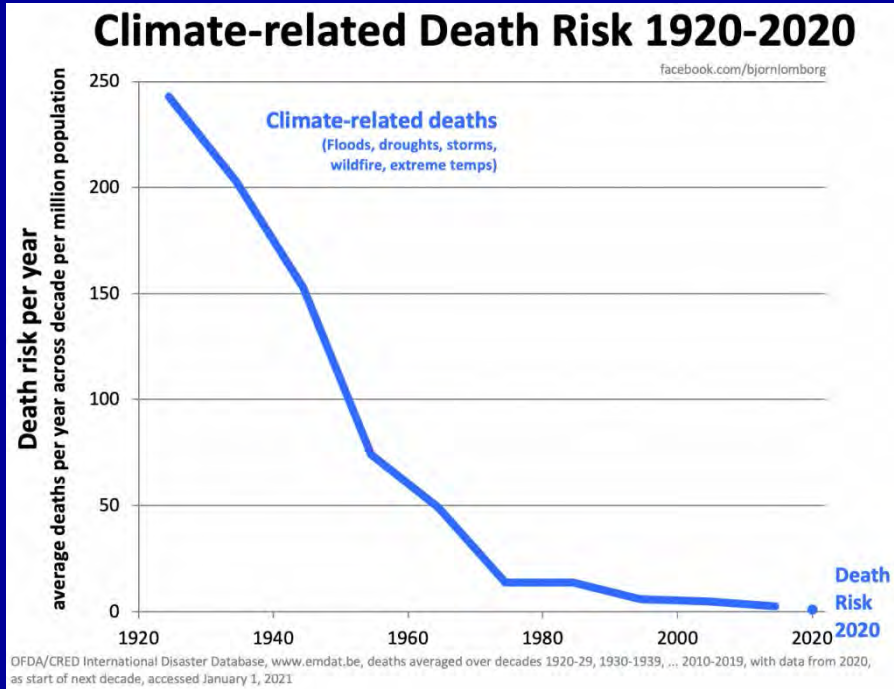

In Al Gore's new book, "An Inconvenient Sequel: Truth to Power", the former Vice President features a professor of pediatrics warning that global warming is impacting our health.

We Must follow “the science”

**If you die from cancer, car accident, or
organ failure --**

you could be a climate death toll statistic.

The reality destroys the claims

After 100 years of climate change, 'climate-related deaths' approach zero – Dropped by over 99% since 1920 -- Meteorologist Anthony Watts

Greenhouse gas emissions

Three Americans create enough carbon emissions to kill one person, study finds

The analysis draws on public health studies that conclude that for every 4.434 metric tons of CO2 produced, one person globally will die

Welcome to 2030. I own nothing, have no privacy, and life has never been better.

This is the vision of the Great Reset, according to globalist leaders. While proponents of the Great Reset push slogans like “Build Back Better,” “The Fourth Industrial Revolution,” and “A New Normal,” the Reset is nothing short of a rebranded Soviet system, threatening to strip away property rights, restrict freedom

USA's Climate 'Solutions' Future?!

Flashback 2011: 'Era of Constant Electricity at Home is Ending, says UK power chief' —

'Families would have to get used to only using power when it was available'

Era of constant electricity at home is ending, says power chief

⦿ The days of permanently available electricity may be coming to an end, the head of the power network said yesterday.

Families would have to get used to only using power when it was available, rather than constantly, said Steve Holliday, chief executive of National Grid. Mr Holliday was challenged over how the country would "keep the lights on" when it relied more on wind turbines as supplies of gas dwindled. Electricity provided by wind farms will increase six-fold by 2020 but critics complain they only generate on windy days.

Mr Holliday told Radio 4's *Today* programme that people would have to "change their behaviour". "The grid is going to be a very different system in 2020, 2030," he said. "We keep

thinking that we want it to be there and provide power when we need it. It is going to be much smarter than that.

"We are going to change our own behaviour and consume it when it is available and available cheaply."

Mr Holliday was speaking ahead of a speech last night to the Royal Academy of Engineering, in which he warned that the government was "looking more to communities and individuals to take power into their hands".

He also warned that pylons would still be used to carry power cables across the countryside because it was 10 times more expensive to bury them.

"As a society, we all need to be clear about what we can and cannot afford," he said.

Coming to America? Climate regs = human suffering - UK Guardian - April 2021

Requires 'Personal changes': Home radiators will have to be 10 degrees cooler for Britain to reach climate targets of 'net zero'

Radiators would have to run 10 degrees cooler under changes to homes needed for Britain to hit net zero, the public has been warned. The Government has said it wants 600,000 heat pumps replacing gas boilers every year by 2028 to help decarbonise the country's home heating, which accounts for 10 per cent of the UK's greenhouse gas emissions.

#

Homeowners will have to put up with central heating that is cooler by 10 degrees C if Britain is to hit climate change targets - "UK is half way to net zero emissions but next stage requires 'personal changes'"

For my fall syllabus

There are 81 million acres being used for energy in the U.S. We may need four times that to meet our green goals.

[bloomberg.com/graphics/2021-...](https://www.bloomberg.com/graphics/2021-...) via @bbgvisualdata

U.S. Needs A Lot More Land to Go Green by 2050

We may need 250 million acres for wind farms alone.

Energy Dominance Under Trump!

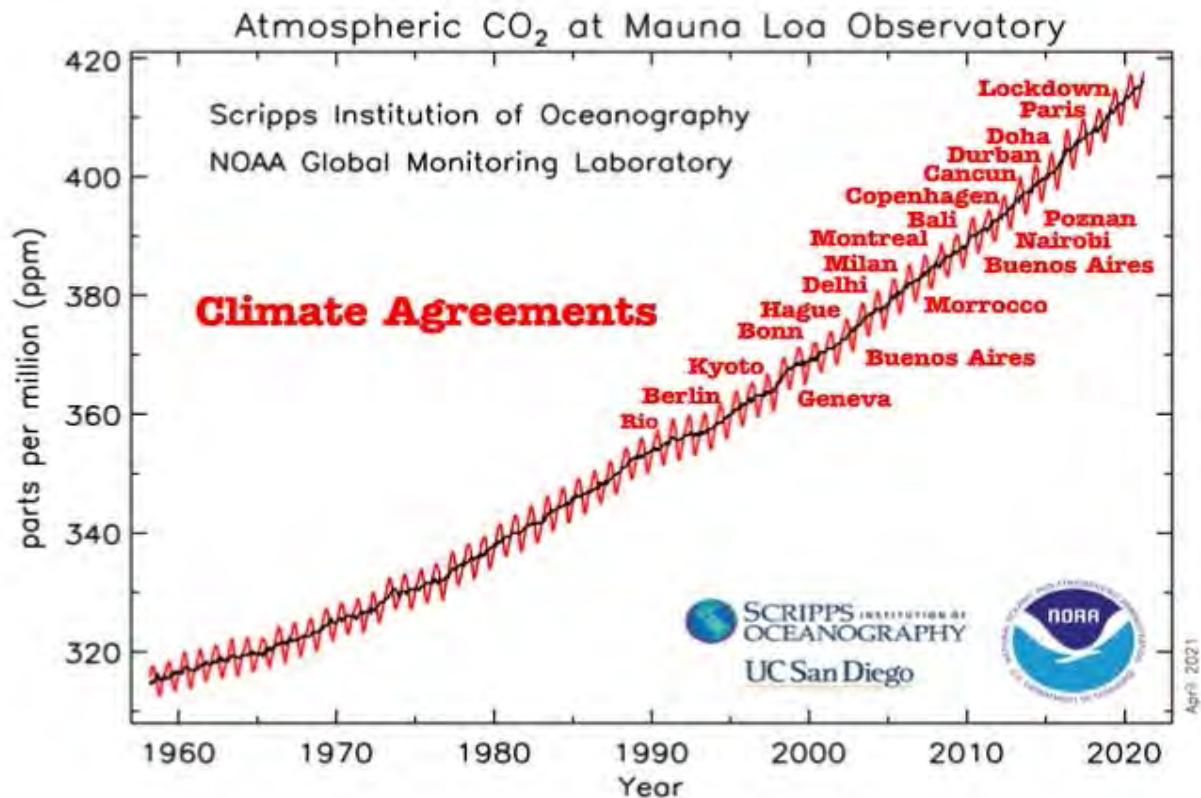

U.S. Energy Information Administration (EIA): The United States has now returned to a position of energy dominance for the first time since the 1950s, during the administrations of Harry S. Truman and Dwight D. Eisenhower.

“In 2019, U.S. energy production exceeded energy consumption for the first time since 1957, and U.S. energy exports exceeded energy imports for the first time since 1952,” the EIA reported in 2020.

And the U.S. was doing all of this while leading the world in reducing carbon dioxide emissions without a cap-and-trade, carbon (dioxide) taxes, a Green New Deal, or being committed to the UN Paris Agreement.

Climate Futility

UN Climate Chief **Christiana Figueres:** **China “doing it right”** on global warming

China's “political system avoids some of the legislative hurdles seen in countries including the U.S.”

Got Freedom?

UN Climate Chief Christiana Figueres laments U.S. democracy is 'very detrimental' in war on global warming

- Lauds one-party ruled China for 'doing it right' on climate change**
- 'China is also able to implement policies because its political system avoids some of the legislative hurdles seen in countries including the U.S., Figueres said.' - January 2014**

China puts growth ahead of climate with surge in coal-powered steel mills

China's expansion of coal-powered steel mills accelerated sharply in the first half of 2021, exposing the government's reluctance to sacrifice industry-fuelled growth to achieve its climate goals.

Analysis of Chinese government approvals by the Centre for Research on Energy and Clean Air, a Finland-based advocacy group, found that 18 steelmaking blast furnaces and 43 coal-fired power plants were announced in the first half of this year.

U.S. Green New Deal - No Impact

**STUDY: Green New Deal Would Have ‘No Effect’
On Climate Change –**

**Even using UN ‘science,’ GND’s temperature
impact would be ‘barely distinguishable from zero’
- April 2019 study by American Enterprise Institute**

UN & Gov't Regs Can't Control The Climate

University of Pennsylvania geologist Robert Giegengack:

“None of the strategies that have been offered by the U.S. government or by the EPA or by anybody else has the remotest chance of altering climate if in fact climate is controlled by carbon dioxide.”

CLIMATE DEPOT

The book cover features a close-up photograph of a woman with dark hair and eyes, looking upwards with an open mouth as if shouting or speaking passionately. The background is a solid blue color. The title 'GREEN FRAUD' is prominently displayed in large, bold, black letters, with 'GREEN' on a yellow rectangular background and 'FRAUD' on a black rectangular background. Below the title, the subtitle 'Why the Green New Deal Is Even Worse Than You Think' is written in white. The author's name 'MARC MORANO' is in bold black letters, followed by his credentials in a smaller font. At the bottom, it mentions a foreword by Mark Steyn.
